# Studio Ghibli API

## スタジオジブリ作品 STUDIO GHIBLI

- <https://ghibliapi.herokuapp.com>
- Catalogues all movie information, including information about the characters and setting.
- Includes:
  - Films
  - People
  - Locations
  - Species
  - Vehicles

# Data Classes

# Data Classes and API code

# Questions

**Once you had to consume the API, did you have to change your data classes? If so, what did you change?**

We assumed that the filmID would be a string, but as some characters and species appear in multiple films, filmID was changed to a list.

**If there were no changes, were there any issues you encountered while working with the API?**

We filtered this data out in the People class:

- Incorrectly named key (“gander” instead of “gender”)
- Incorrect species URL
